

GravityZone Full Disk Encryption

Keep business data secured and compliant

Data is the most important asset in the digital economy. Employees carrying a laptop loaded with company sensitive information during business trips, commute or employees working from home, are exposed to risk of losing or theft. If a lost mobile device can be replaced on a limited cost, losing data can lead to loss of customers, damaged reputation or significant financial loss. To avoid this risk and stay within compliance regulations you need to fully encrypt the hard drive of your mobile endpoints.

Bitdefender Full Disk Encryption is leveraging the encryption mechanisms provided by Windows (BitLocker) and Mac (FileVault), taking advantage of the native device encryption, to ensure compatibility and performance. There will be no additional agent to deploy and no key management server to install.

By using the Bitdefender GravityZone Cloud MSP Security console also for managing Full Disk Encryption, the deployment is fast and painless. Once activated the encryption management module on the existing console, the deployment of encryption on the endpoints can be centrally initiated and fully managed.

With Bitdefender GravityZone Full Disk Encryption MSPs can:

- Protect sensitive data when devices are lost or stolen
- Get reports to demonstrate compliance with regulations such as GDPR or HIPAA
- Gain rapid visibility across customers, centrally encrypt by policy, and restore keys
- Eliminate performance and compatibility issues with the native BitLocker on Windows and FileVault on Mac
- Consolidate encryption key management and security
- Upsell to customers or differentiate their offering

At-a-Glance

GravityZone Full Disk Encryption reduces the risk of data loss or theft while simplifying security and compliance with regulations such as GDPR, HIPAA, PCI DSS and more. It enables MSPs to consolidate encryption reporting, key management and recovery with endpoint security in a single, unified platform. Avoid slowdowns or software compatibility issues with native BitLocker and FileVault on Windows and Mac.

Why MSPs choose Bitdefender

- One stop-shop for endpoint protection and encryption management from the GravityZone Cloud MSP Security console
- Proven native encryption for Windows (BitLocker) and Mac (FileVault) and no performance issues - no new agent required
- Encryption specific reports that help demonstrate compliance
- Flexibility and scalability achieved through monthly per-use licensing model.

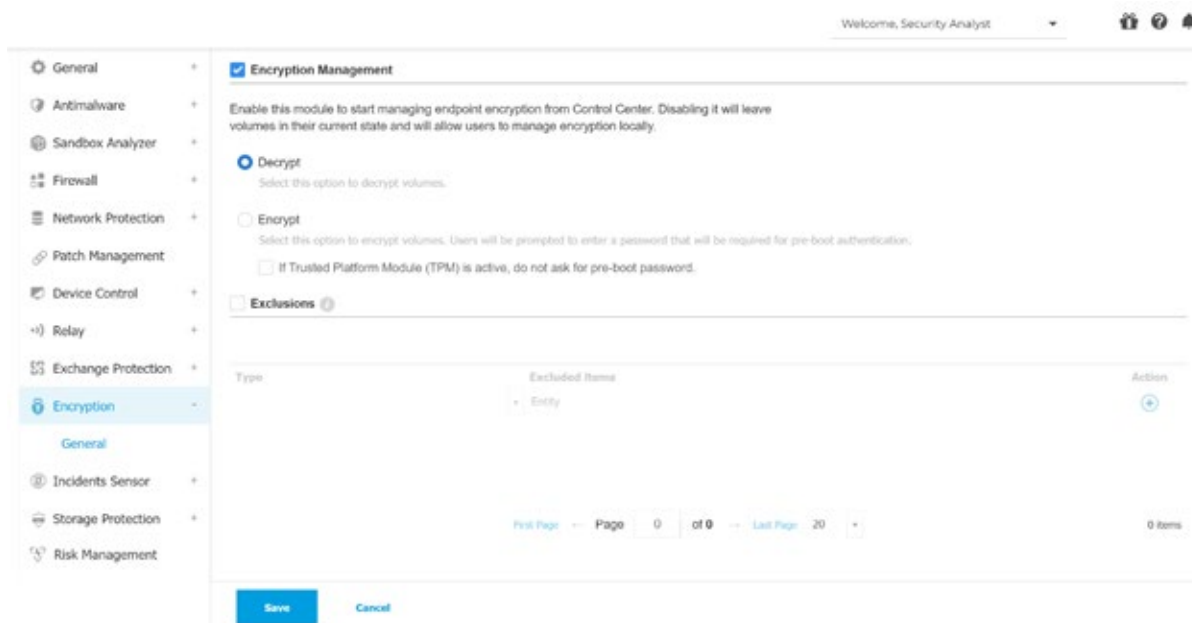

With Full Disk Encryption, it's easy to manage the BitLocker encryption keys from the GravityZone console. With people working from home due to COVID-19, it's useful that we can manage the blocking and unblock of encrypted devices remotely. GravityZone provides an important layer of protection and security for our clients' proprietary data and intellectual property stored on our workstations.

One console for endpoint protection and encryption management

Bitdefender GravityZone Cloud MSP Security console is the one stop shop, not only for protecting your endpoints from malicious software or targeted attacks but also for compliance reporting and encryption key recovery. Simplicity and ease of management will enable security personnel to stay focused and work more efficiently.

Encryption is available for managed service providers as an optional billable service with monthly pay-per-use licensing.
