GravityZone Security for Exchange Servers

Secure messaging and collaboration with minimal resource consumption

GravityZone Security for Exchange Servers employs multi-layer protection against spam and phishing to determine if email messages are spam or threat vectors. We provide the most powerful, real-time defense against spam and phishing attempts, all powered by Bitdefender's Global Protective Network.

Unlike traditional solutions that increase the load of mail servers, Bitdefender combines all the security services an organization needs into a single delivery platform that can offload the security tasks from servers and endpoints to virtual appliances. GravityZone helps organizations reduce the total cost of securing their environment through one optimized application with efficient management, easy deployment, and enforcement of security policies for Exchange mail servers, virtual machines, physical endpoints, and mobile devices.

Key capabilities

• Layered protection from email-based threats provides anti-spam, anti-phishing, antivirus and antimalware protection, with advanced behavioral analysis and zero-day threat detection built-in.

• Email traffic filtering, including attachment and content filtering, protects both inbound and outbound Exchange messages.

• Antimalware scanning – ensures your users are safe from sophisticated threats and exploits, and can be off-loaded to centralized security servers from the protected mail servers.

• Easy-to-use, centralized management and reporting enables unified policies for endpoints and messaging.

• Single delivery platform – combines all the security services an organization needs into a unified delivery platform that can offload the security tasks from servers and endpoints to security virtual appliances for unparalleled protection from advanced threats.

• Integration with Active Directory, VMware vCenter, and Citrix XenServer for easy-to-manage remote deployments.

At-a-Glance

GravityZone Enterprise Security for Exchange Servers provides top-rated antispam and antimalware for mail servers, ensuring a secure messaging and collaboration environment with minimal use of resources.

Key Benefits

• Easy mobile security management through the web-based console you already use to manage virtualized and physical endpoints

• Secured Microsoft Exchange environment – from both external and internal threats

• Best antispam protection for mail servers: Golden SPAM+ award winner for two years in a row from Virus Bulletin

"Bitdefender blocked 99.98% of spam – and did so without a single false positive in either corpus of legitimate emails."

Bitdefender

BUILT FOR RESILIENCE

Bitdefender GravityZone offers Advanced Pattern Matching (APM)

A powerful heuristic antispam filter that detects unknown spam. Based on artificial neural networks, the APM filter is trained on large volumes of spam messages inside the Bitdefender Antispam Lab. During training, it learns to distinguish between spam and legitimate emails and to recognize new spam by perceiving its similarities, often very subtle, with messages it has already examined. This filter is highly accurate, minimizing false positives.

Real Time Data Analysis (RTDA)

Filter that employs Global Protective Network security cloud to detect spam messages and to provide rapid protection against 0-day and advanced threats.
